

**PRODUCTIONCRATE**

Thank you for downloading our **Auto Cinemabar** plugin!

We grew tired of digging through mountains of templates, and decided to give the community a break by creating this automatic letterbox generator. All it takes now is one click, and you will have your project looking extra cinematic in no time!

To install, copy the "Auto Cinemabar.aex" file into your plugin folder for either After Effects, or Premiere Pro. It's as simple as that!

Select your chosen aspect ratio either through the preset list, or enter your own value in the slider. Applying the effect to a black solid layer, and enabling "Transparent Image" is best way to apply the new letterbox over an entire composition!

If you have any questions, contact **[support@productioncrate.com](mailto:support@productioncrate.com)**
